

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

Claim 1 (canceled).

Claim 2 (previously presented) The automatic transaction device according to claim 11, wherein the WEB transaction processing unit transmits information obtained in the normal transaction to the WEB server.

Claim 3 (canceled).

Claim 4 (previously presented) The automatic transaction device according to claim 11, wherein the WEB transaction-use state table includes a specification of an extension file including a part of definition of the state.

Claims 5-10 (canceled).

Claim 11 (currently amended) An automatic transaction device, comprising:

a storing unit which stores therein a state table group that is a collection of state tables, the state table group including a normal transaction-use state table defining a state in which the automatic transaction device gets into normal transactions and a WEB transaction-use state table defining a state in which the automatic transaction device gets into during WEB transactions;

a normal transaction processing unit which executes a normal transaction ~~process~~ with a predetermined normal transaction-use host;

a WEB transaction processing unit which executes a WEB transaction with a predetermined WEB server;

a normal transaction control unit which controls the normal transaction processing unit based upon the normal transaction-use state table;

a WEB transaction control unit which is placed in a separated manner from the normal transaction control unit and controls the WEB transaction processing unit based upon the WEB transaction-use state table; and

a state table acquiring unit which acquires a state table from a source of the state table through a communication line and sets, supplements, or updates the WEB transaction-use state table in the state table group based upon the state table,

wherein the WEB transaction-use state table includes:

a specification of a screen displayed upon accessing the WEB server;

a specification of an extension file including a part of definition of the state;

a specification of a screen displayed upon printing a receipt;
a specification of a screen displayed upon outputting the receipt;
a specification of the next state table upon normal completion of the WEB transaction;
a specification of a next state table upon completion of the WEB transaction with a
predetermined code;
a specification of a screen displayed in the event of time out; and
a specification of an extension state table, and
wherein the extension state table includes:
a specification of a screen displayed in the event of a time out; and
a specification of a next state table upon completion of the WEB transaction with a
predetermined code.

Claim 12 (previously presented) The automatic transaction device according to claim 11, wherein the WEB transaction-use state table enhances the normal transaction-use state table to define the state in a similar format as the normal transaction-use state table.

Claim 13 (previously presented) The automatic transaction device according to claim 11, wherein the WEB transaction-use state table includes:

a specification of a screen displayed upon accessing the WEB server;
a specification of an extension file including a part of definition of the state;

a specification of a screen displayed upon printing a receipt;
a specification of a screen displayed upon outputting the receipt;
a specification of the next state table upon normal completion of the WEB transaction;
a specification of a next state table upon completion of the WEB transaction with a
predetermined code;
a specification of a screen displayed in the event of time out; and
a specification of an extension state table.

Claim 14 (previously presented) The automatic transaction device according to claim
13, wherein the extension file includes:

a specification of URL to be accessed by the automatic transaction device;
a specification of a time-out time;
a specification of URL to be accessed by the automatic transaction device in the event of
an error;
a specification of a time-out time in the event of an error; and
a specification of display time of a screen displayed in the event of an error.

Claim 15 (previously presented) The automatic transaction device according to claim
13, wherein the extension state table includes:

a specification of a screen displayed in the event of a time out; and

a specification of a next state table upon completion of the WEB transaction with a
predetermined code.
